Viktig å vite: Kane Biotech er et canadisk firma som spesialiserer seg på inhibering av biofilm. De har sammen med AnimalCare Ltd i Europa utviklet tannprodukter. Disse markedsføres under forskjellige navn, selvom de er like. Kane Biotech har derfor denne studien som gjelder for flere merkenavn, derunder Plaqtiv+ som markedsføres i Europa av AnimalCare Group Ltd. Hos VOHC er likevel de ulike merkenavnene notert, så det blir minst mulig forvirring. Se også www.kanebiotech.com/#stem

Summary

The objective of this study was to determine the efficacy of coactiv+ Bluestem Oral Care Water Additive in the chemical prevention of dental plaque and calculus following at least 28 days of oral administration via drinking water to beagle dogs. The total duration of dental assessment was 84 days (three sets of 28 days each). Thirty-two (32) healthy beagle dogs were randomly assigned to either the treated group or the control group (16 dogs/group).

Because of the logistical challenges involved with the large number of dogs in this study (32 total; 16 dogs per each of the two treatment groups) and to avoid inherent scorer fatigue with number of dogs to score in a single day, study animals were divided into two staggered groups. All procedures for study animals assigned to first staggered cohort were performed one day prior to second staggered cohort.

On Acclimation Phase Day 7 or 8, each dog had initial dental prophylaxis performed. On Acclimation Phase Day 14, all dogs were scored for plaque and calculus, received dental prophylaxis, plus had photographs taken of both sides of their mouths.

On Dosing Phase Day 1, test article administration began. coactiv+ Bluestem Oral Care Water Additive was administered to dogs in the treated group daily in their drinking water (1 mL coactiv+ Bluestem Oral Care Water Additive to 30 mL with Poland Springs bottled water) for 84 consecutive days. Dogs in the control group received Poland Springs bottled water for 84 consecutive days.

On Dosing Phase Days 29, 57, and 85, dogs were scored for plaque, gingival index, and calculus for both the whole tooth and the gingival half. Photographs of both sides of their mouths were taken at each event.

The percent reduction for *plaque* score on Dosing Phase Day 85 for whole mouth mean gingival + occlusal and whole mouth mean gingival only for the treated group were 1.85 and 2.73%, respectively, as compared to the control group. There was no significant difference between both plaque scores ($p > 0.716$ and $p > 0.597$, respectively) for the two treatment groups.

The percent reduction for *gingivitis* score on Dosing Phase Day 85 for whole mouth mean for the treated group was 5.31% as compared to the control group. There was no significant difference ($p > 0.573$) between the gingival index scores for the two treatment groups.

The *calculus* scores for the treated group were lower than the control throughout the study. On Dosing Phase Day 85, the percent reduction for whole mouth mean gingival + occlusal and whole mouth mean gingival only for the treated group were 26.66 and 21.15%, respectively, as compared to the control group. The difference between the two treatment groups was significant for both scores ($p < 0.0161$ and $p < 0.0373$, respectively).

The impact of the test article on body weights, food consumption, and clinical observations were evaluated as part of this study with no differences observed between the two treatment groups.

No significant treatment effects were seen with the exception of calculus scores. The coactiv+ Bluestem Oral Care Water Additive group exhibited a statistically significant 26.66 and 21.15% reduction in calculus scores for whole mouth mean gingival + occlusal and whole mouth mean gingival only on Dosing Phase Day 85 as compared to the control group.

1 Objectives

The objective of this study was to determine the efficacy of coactiv+ Bluestem Oral Care Water Additive in the chemical prevention of dental plaque and calculus following at least 28 days of oral administration via drinking water to beagle dogs.

2 Study Schedule of Events

Event	Date
Study Initiation	11 Jan 2021
Experimental Start Date	13 Jan 2021
Dose Initiation Cohort A	27 Jan 2021
Dose Initiation Cohort B	28 Jan 2021
Completion of In-Life Cohort A	21 Apr 2021
Completion of In-Life Cohort B	22 Apr 2021

3 Study Amendments and Deviations

Changes to the study design were documented using protocol amendments approved by the Sponsor and signed by the Study Director. The study protocol and amendments are in [Appendix 1](#). Deviations (Standard Operating Procedure [SOP] or protocol) that occurred on study were documented. The Study Director reviewed all deviations, determined the impact of the deviations on the quality and integrity of the study, and then signed the deviations. Protocol deviations are included in Section 7, [Deviations](#). The SOP deviations that did not adversely impact the quality and integrity of the study are maintained in the study file.

4 Study Materials and Methods

4.1 Test Article and Vehicle Article

4.1.1 Test Article Information

The test article was coactiv+ Bluestem Oral Care Water Additive.

The test article was received by SRC from the Sponsor and stored ambient upon receipt. Each individual material was assigned a unique SRC Sample ID number.

The Sponsor provided SRC the Safety Data Sheet prior to initial dose administration.

One case (12 containers) of unused test article was returned to the Sponsor while the remaining test article was discarded per Sponsor's request.

4.1.2 Vehicle Article Identification

The vehicle article was bottled water (Poland Springs). The vehicle article was purchased by SRC and stored ambient upon receipt. Each individual container was assigned a unique SRC

Sample ID number. The vehicle article is a marketed product and information is on file with the manufacturer.

All remaining unused vehicle article was discarded or returned to SRC stock per Sponsor's request.

4.1.3 Dose Preparation

The test article was received as a liquid and prepared by SRC per Sponsor-provided instructions. The test article was prepared daily prior to dose administration and stored ambient until use. Any remaining formulations were discarded following the completion of each day's dosing procedures.

4.2 Test System

4.2.1 Animal Identification, Housing, and Environmental Conditions

Species/Strain:	<i>Canis familiaris</i> /beagle (naïve)
Source:	Marshall BioResources
Number/Sex Reserved:	36 (mixture of both sexes)
Number/Sex Placed:	32 (mixture of both sexes)
Age:	1.4 to 2.1 years on Dosing Phase Day 1
Weight:	6.6 to 11.4 kg on Acclimation Phase Day 12
Randomization:	Animal selection and randomization procedures were conducted by SRC personnel using Microsoft® Excel 2011 or newer version. Random numbers were generated using the "Rand" function of Excel and captured using the "copy/ paste special/ values" commands. The "Rank" function in Excel was used to assign animals to groups within blocks by random number. In addition, single factor ANOVA data analysis ($\alpha=0.05$) in Excel was used to assess the outcomes of randomizations for homogeneity of variance (F statistic < F critical value) between groups. ANOVA was conducted for body weight (measured on Acclimation Phase Day 12) between staggered groups; and for plaque and gingival index scores (previously measured) and body weight (measured on Acclimation Phase Day 12) between treatment groups within each staggered group.
Identification:	Ear tattoo and cage card; A study ID was assigned to each animal, consisting of a group number, sex (males = 0 to 4; females = 5 to 9), and an animal number within a group (replicate). For example, 1002:3930956= Group 1, male, replicate number 2, ear tattoo number 3930956
Acclimation:	14 to 15 days, with the exception of 12 days for Animal 2011
Housing:	Stainless steel with self-spanned polyvinyl chloride (PVC)-coated expanded metal flooring

Number Per Cage/Pen:	1
Enrichment:	Species-specific enrichment was provided to all animals with the exception of chew toys or dental treats.
Environmental Conditions:	Per SRC SOPs ¹ with the exception of standard cleaning/sanitation procedures for housing room, including food and water bowls. Instead, food and water bowls were cleaned daily with a scrub pad/brush and completely rinsed with SRC tap water. NOTE: Bowls, used to provide the test or vehicle article, were labeled/marked accordingly for animal identification to minimize use for other treatment group. Only soap (e.g., Dawn) and/or water was employed during sanitation procedures of housing room, cages, and bowls, with the exception of Acclimation Phase Day 13, when chemicals were used to clean the housing room, cages, and bowls.
Photoperiod:	12 hours light/12 hours dark

4.2.2 Diet and Water

Diet:	Type/Name:	Purina Dog Chow Dry Food
	Availability:	Once daily per SRC SOP ¹
Water:	Source:	Poland Springs bottled water
	Availability:	<i>Ad libitum</i> excluding 30 ± 15 minutes prior to and following offering of daily diet, with exceptions in Section 7, Deviations .
	Comments	Drinking water, including the water additive product for designated animals, was offered via stainless steel water bowls during the study.

Available analytical results of feed are maintained in the facility records. The feed and water do not contain any contaminants that are known to interfere with the study.

4.2.3 Test System Justification

The dog is the target species for this product. Oral dosing (i.e., drinking) is the intended dose route which was selected for this study.

4.2.4 Veterinary Care and Medication

Animals were examined by the veterinary staff as warranted by clinical signs or other changes. On Acclimation Phase Day 3, Animal 3906982 was excluded from study due to a general health finding and Animal 3998178 (Study ID 2011) was assigned as a replacement animal. The delay to study assignment had no impact on study results as this animal underwent appropriate dental procedures during the Acclimation Phase to meet inclusion criteria. On Dosing Phase Day 2, Animal 3934676 (Study ID 1510) was excluded from study due to a facial injury and Animal 3926304 (1010R) was assigned as a replacement animal. The delay to study had minimal impact on study results (refer to in Section 7, [Deviations](#)) as this animal was receiving the same diet and water as other animals in the control group. All examinations were documented in the study records and no non-routine treatments were administered during the study period.

4.3 In-Life Procedures

4.3.1 Experimental Design

For this parallel dental study, animals were divided into two cohorts of 16 animals per group (control and treated) and received either control diet only (Purina Dog Chow) or control diet plus chemical active ingredient in water for at least 35 days during the dosing phase (i.e., a 28 day evaluation period plus an at least seven day statistical analysis period). Following Dosing Phase Day 29 scoring, statistics were performed and evaluated by BioSTAT consultants within one week to determine whether the study animals continued through to the next 28 day evaluation event (to Dosing Phase Day 57 scoring plus a 7 day statistical analysis period) or terminate in-life procedures by Dosing Phase Day 64. This step was repeated a second time with an additional 28 day event (to Dosing Phase Day 85) then in-life procedures were terminated.

Experimental Design Scheme

Study Phase Day	Groups	
	1: Vehicle Article (16 animals)	2: Test Article (16 animals)
Acclimation Phase Days 7 or 8	Scale and polish teeth	
Acclimation Phase Day 14	Score plaque Randomize to study cohort (A or B) and treatment group (Vehicle or Test Article) based on plaque score. Scale and polish teeth after scoring, to ensure plaque and calculus scores are zero at the start of the study	
Dosing Phase Days 1 to 85	Dose with Vehicle Article	Dose with Test Article in Vehicle Article
Dosing Phase Days 29, 57, and 85	Dental scores and photographs	
Dosing Phase Days 29 to 36 and 57 to 64	Statistical analysis and determination of study progression; continue assigned treatments.	

4.3.2 Dose Level Justification

The dose level of the test article is the current label dose of the product administered to dogs (dilute 1 mL coactiv+ Bluestem Oral Care Water Additive to 30 mL with water).

4.3.3 Masking

During the conduct of this study, dental scoring for gingivitis, plaque, and calculus were performed by a masked (blinded) scorer.

4.3.4 Dose Administration

All animals were administered the vehicle article *ad libitum* via water bowl starting on Acclimation Phase Day 1 excluding 30 ± 15 minutes prior to and following daily diet offering, with exceptions in Section 7, [Deviations](#). Starting on Dosing Phase Day 1, study animals were

offered the test or vehicle article *ad libitum* via water bowl. Each water bowl was labeled per study animal and dosing procedures were completed per SRC SOPs¹.

4.3.5 Mortality/Moribundity Observations

In-cage observations were performed twice daily in the AM and PM (with at least 4 hours between observations, with the exception of Acclimation Phase Day 7, when observations were performed 3 hours and 50 minutes apart) during the study period to assess general health, mortality, or moribundity.

4.3.6 Physical Examinations

Each animal underwent a physical examination on Acclimation Phase Day 1, with the exception of Animal 2011 which underwent a physical examination on Acclimation Phase Day 6, by an SRC veterinarian to determine animal suitability for study.

4.3.7 Body Weights

Each animal was weighed on Acclimation Phase Day 1, with the exception of Animal 2011 which was weighed on Acclimation Phase Day 3, then all animals were weighed on Dosing Phase Days 28, 56, and 84.

4.3.8 Food Consumption

A quantitative assessment of food consumption was taken daily starting on Acclimation Phase Day 10 through study termination, with the exception of Animal 1014 on Dosing Phase Day 83, and reported as grams/animal/day.

4.3.9 Detailed Clinical Observations

Detailed clinical observations were performed once daily starting on Dosing Phase Day 1, except Animal 1010R which was placed on study on Dosing Phase Day 2 as a replacement animal, through study termination. The animals were observed for clinical signs of illness or reaction to dose administration including dose site reactions.

4.3.10 Anesthesia

For each dental procedure, animals were food fasted overnight (≥ 8 hours), induced with propofol (5 to 6 mg/kg, intravenously) and maintained with isoflurane (1 to 5% in 100% oxygen). Animals were intubated for dentistry and scoring procedures. When dental procedures were completed the animals were extubated and recovered from anesthesia per SRC SOPs¹

4.3.11 Photography

Two-dimensional digital color photographs were taken of each side of all animals' mouths following prophylaxis and/or dental scoring procedures, with exceptions listed in Section 7, [Deviations](#). Photography procedures and maintenance of collected images was completed per SRC SOPs¹.

4.3.12 Dental Prophylaxis

On Acclimation Phase Days 7 or 8 and 14 or 15, all animals' teeth were scaled with an ultrasonic scaler on the buccal surfaces of at least maxillary I3, C, P3, P4, M1 and mandibular C, P3, P4, M1 (VOHC teeth). The teeth were then sprayed with 2% eosin Y solution and gently rinsed with water from a spray bottle. If the teeth were not clean, re-scaling and re-polishing were performed. The teeth were polished with fine ground pumice/glycerin combination.

4.3.13 Dental Scoring

On Acclimation Phase Days 14 or 15 and Dosing Phase Days 29, 57, and 85, the buccal surfaces of the VOHC teeth, the adjacent gingiva, and other mucosal surfaces of all animals were inspected, with the exception of the calculus score for M1 maxillary occlusal thickness in Animal 1011 on Dosing Phase Day 29. Presence or absence of inflammation, oral ulceration, and/or lacerations were also recorded at each scoring event. The parameters were measured in the following order: gingival index, plaque, and calculus.

Gingival Index

Gingival index was assessed on VOHC teeth, bilaterally, for all animals. Measurements were taken according to a modified Löe and Silness Gingival Index. Gingival index was measured by gently sweeping the sulcus of each tooth with a Michigan probe and assigning each tooth a score. The averages of all tooth scores were taken to yield a whole mouth gingivitis mean score.

Plaque

Plaque was assessed for the VOHC teeth, bilaterally, for all animals. Plaque was disclosed (visualized) with 2% eosin solution that was sprayed on the tooth to not disturb the plaque layer for subsequent scorings. The teeth were scored according to the Logan and Boyce Method. The teeth were divided into gingival and occlusal halves and assigned thickness and coverage scores. The thickness score was converted to a numerical score (Z=0, L=1, M=2, and D=3). The coverage score was multiplied by the thickness score, and the gingival and occlusal values for each tooth were added together to give the tooth score. The tooth scores were averaged to yield the whole mouth mean plaque score.

Following scoring, the disclosing agent (eosin) was removed with a toothbrush and rinsed from the teeth using a dental air-water syringe. The teeth were then air dried to accommodate visualization of the calculus accumulation.

Calculus

Calculus was assessed for the VOHC teeth, bilaterally, for all animals, with the exception of the calculus score for M1 maxillary occlusal thickness in Animal 1011 on Dosing Phase Day 29. A 2.5x ocular loop was worn to help visualize the calculus deposits. The teeth were scored according to a modified Warrick-Gorrel Method. The teeth were divided into gingival and occlusal halves, and assigned thickness and coverage scores. The thickness score was converted to a numerical score (Z=0, L=1, M=2, and D=3). The coverage score was multiplied by the thickness score, and the gingival and occlusal values for each tooth were added together to give the tooth score. The tooth scores were averaged to yield the whole mouth mean calculus score.

Proper documentation was not performed at each scoring event, however, the following consultant was used for all scoring procedures and was blinded (masked) to treatment groups:

Dental Consultant Contributing Scientist:

Mary L. Berg, BS, LATG, RVT, VTS (Dentistry)

Beyond the Crown Veterinary Education

Lawrence, Kansas

Phone: (785) 331-5319

E-mail: mlberg@btcveted.com

4.4 Animal Disposition

Following Dosing Phase Day 2, extra animals not placed on study were transferred to the Testing Facility open colony.

Following completion of all in-life procedures on Dosing Phase Day 85, study animals were transferred to the Testing Facility open colony.

4.5 Computerized System

The following validated computerized system was used in this study. Time points were grouped together using the Pristima[®] function “grace days” to allow for combined comparison of individual animals/groups collected on separate days.

System Name	Version No.	Description of Data Collected
Pristima [®] (Xybion Corporation, Princeton, New Jersey)	7.4 or newer	Applicable in-life data

4.6 Assessment of Effectiveness

The variables of interest for each dog are the whole mouth gingival, plaque, and calculus mean scores for both the whole tooth and the gingival half. Descriptive summary tables were generated for each variable, including means and standard deviations/errors as appropriate with percent reduction in scores using the following formula:

$$\% \text{ reduction} = (\text{control group mean} - \text{treatment group mean}) / \text{control group mean}$$

4.7 Statistical Analysis

The following table defines the set of comparisons used in the statistical analyses described below for the study animals.

Table of Statistical Comparisons	
Vehicle Article Group	Comparison Group
1	2

The following parameters were statistically analyzed:

Statistical Endpoints	
Plaque	Calculus
Gingival Index	

Methods used in statistical analysis are described in the Statistical Analysis Report in [Appendix 3](#).

5 Results

5.1 Mortality/Moribundity Observations

There were no instances of moribundity or unscheduled deaths during the study.

5.2 Physical Examinations

All individual animal physical examination results are in [Table 1 \(Appendix 2\)](#).

All animals underwent a physical examination and were deemed satisfactory for study inclusion.

5.3 Body Weight

All individual animal body weight results are in [Table 2 \(Appendix 2\)](#).

There were no test article-related effects on body weight relative to dose group. As expected, most animals maintained body weight during the study, and while some gained or lost weight, the numbers were comparable between the two treatment groups.

5.4 Food Consumption

All individual animal food consumption results are in [Table 3 \(Appendix 2\)](#).

There were no test article-related effects in the amounts of food consumed between treated and control group animals.

5.5 Clinical Observation Findings

The complete list of clinical observation findings is in [Table 4 \(Appendix 2\)](#).

There were no test article-related clinical observation findings. Abnormal clinical observations included excretions (eyes, nose, and ear discharge), salivation, abrasions/scabs, edema, and hair. These are common findings for adult, laboratory beagle dogs.

5.6 Dental Scoring

All individual animal dental scores for plaque, gingival index, and calculus are in [Table 5](#), [Table 6](#), and [Table 7 \(Appendix 2\)](#), respectively. Group summary dental scores are discussed in the Statistical Analysis Report in [Appendix 3](#).

The percent reduction for plaque score on Dosing Phase Day 85 for whole mouth mean gingival + occlusal and whole mouth mean gingival only for the treated group were 1.85 and 2.73%, respectively, as compared to the control group. There was no statistically significant difference between both plaque scores ($p > 0.716$ and $p > 0.597$, respectively) for the two treatment groups.

The percent reduction for gingivitis score on Dosing Phase Day 85 for whole mouth mean for the treated group was 5.31% as compared to the control group. There was no statistically significant difference ($p > 0.573$) between the gingival index scores for the two treatment groups.

The calculus scores for the treated group were lower than the control throughout the study. On Dosing Phase Day 85, the percent reduction for whole mouth mean gingival + occlusal and whole mouth mean gingival only for the treated group were 26.66 and 21.15%, respectively, as compared to the control group. The difference between the two treatment groups was statistically significant for both scores ($p < 0.0161$ and $p < 0.0373$, respectively).

6 Conclusion

No significant treatment effects were seen with the exception of calculus scores. The coactiv+ Bluestem Oral Care Water Additive group exhibited a statistically significant 26.66 and 21.15% reduction in calculus scores for whole mouth mean gingival + occlusal and whole mouth mean gingival only on Dosing Phase Day 85 as compared to the control group.

7 Deviations

The following protocol deviations occurred during the conduct of this study:

Date of Occurrence	Study Day	Description			
15 Jan 2021	Acclimation Phase Day 3	Animal 2011 underwent 12 days of acclimation instead of at least 14 days plus initial weight measured on Day 3 instead of Day 1.			
16 Jan 2021	Acclimation Phase Day 4	The following animals had water returned more than 30±15 minutes after food was offered.			
		Animal ID	Time Outside Window (minutes: seconds)	Animal ID	Time Outside Window (minutes: seconds)
		1002	0:01:38	2003	0:02:01

		1011	0:47	2501	1:13
		1012	0:44	2506	1:07
		1013	0:31	2508	1:01
20 Apr 2021	Dosing Phase Day 83	Animal 1014 did not have food consumption recorded because of removal of food (19 Apr 2021) due to veterinary treatment for presence of vomitus.			
21 Apr 2021	Dosing Phase Day 85	Right side dental photographs for Animal 2004 did not contain clear ruler marks.			
21 and 22 Apr 2021	Dosing Phase Day 85	Documentation of dental scorer was not recorded.			

In the opinion of the Study Director, none of these deviations adversely affected the quality or integrity of the study.

8 Archive

Test Article and Vehicle: Retention samples were not required.

Final Report, Protocol, and Study Data: An electronic PDF of the final report will be provided to the Sponsor. An electronic version of the final report and all contributor reports (internal and external), wet ink report signature pages, original protocol (including amendments and deviations), and original study data (electronic or paper) will be archived at SRC (562 State Road DD, Auxvasse, Missouri) for 1 year following study completion. The Sponsor will be responsible for archival of all paper data and materials thereafter. After the scheduled archival period, the Sponsor shall determine if archival will continue (at additional cost), or if materials are to be shipped to a Sponsor-designated location.

Electronic data generated by SRC will be archived, and the software and hardware required to produce it in a readable form will be maintained and available.

Facility Records: The facility records will be archived at each Test Site according to Test Site SOPs.

1 Objectives

The objective of this study is to determine the efficacy of Coactiv+ Bluestem Oral Care Water Additive in the chemical prevention of dental plaque and calculus following at least 28 days of oral administration via drinking water to beagle dogs.

2 Proposed Study Schedule

Proposed study dates are listed below. Actual applicable dates will be included in the final report.

Animal Arrival / Transfer:	12-JAN-2021
Start of Acclimation:	12-JAN-2021 (First date of study-specific data collection)
Initiation of Dosing:	26-JAN-2021
Completion of In-life (two staggered cohorts):	02/03-MAR-2021 (Dosing Phase Day 36) 30/31 MAR 2021 (Dosing Phase Day 64, if needed) 20/21 APR 2021 (Dosing Phase Day 85, if needed)
Draft Report	10 weeks following end of in life

3 Regulatory Status

The study will be conducted non-GLP and will be conducted by following SRC SOPs¹ and the study protocol.

Dental Consultant/Scorer:	Mary L. Berg, BS, LATG, RVT, VTS (Dentistry) Beyond the Crown Veterinary Education Lawrence, KS Office: (785) 331-5319 E-mail: mlberg@btcvetered.com

Each Contributing Scientist (CS) is required to report any deviations or other circumstances that could affect the quality or integrity of the study to the Study Director in a timely manner. The Dental Consultant/Scorer will not be required to provide a contributor report since data will be generated at SRC and included in the study raw data.

7 Principal Investigators (PI)

Statistical Analysis Les Freshwater, MS
BioSTAT Consultants
23111 64th Avenue
Mattawan, MI, 49071
Office: (269)-329-7971
Email: lesfreshwater@biostat.net

Each Principal Investigator (PI) is required to report any deviations or other circumstances that could affect the quality or integrity of the study to the Study Director in a timely manner. Each PI will provide a contributor report addressing their assigned phase of the study, which will be included as an appendix to the final report.

8 Study Amendments and Deviations

Changes to the study design will be documented using a protocol amendment approved by the Sponsor and signed by the Study Director. Changes that are needed immediately will be documented and signed by the Study Director prior to the change being implemented. If this occurs, the change will be communicated to the Sponsor in a timely manner and captured in a protocol amendment or planned deviation, as appropriate.

Deviations that occur on the study will be documented. The Study Director will review and sign all deviations as well as determine the impact of the deviations on the quality and integrity of the study. Protocol deviations will be included in the final report, while SOP deviations (except those that adversely impact the quality or integrity of the study) will be maintained in the study file. The Study Director will communicate any deviations that could adversely impact the study to the Sponsor in a timely manner.

9 Test Article

9.1 Test Article Information

Test Article Name:	Coactiv+ Bluestem Oral Care Water Additive
Storage Conditions:	The test article will be stored ambient upon receipt.
Characterization:	The Sponsor will be responsible for providing the Safety Data Sheet for the test article prior to the initial dose administration.
Contact:	STEM Animal Health Inc. 162-196 Innovation Dr Winnipeg, MB, R3T 2N2 TEL: (204) 995-3648
Retention:	No retention samples will be collected.
Disposition:	The disposition of the test article will be determined by the Sponsor upon completion of the study and documented in the study data.

The test article will be supplied by the Sponsor or designee and will be shipped to the following address:

Timothy J. Madsen, BA
Sinclair Research Center, LLC
Attn: Sample Control Officer
562 State Road DD
Auxvasse, MO 65231, USA
Office: (573) 387-4400 ext. 237
Email: A_SRC_Test_Article_Receiving@sinclairresearch.com

Receipt, identification, storage, and distribution of the test articles will be per SRC SOPs¹.

9.2 Vehicle Article Information

Vehicle Article Name:	The vehicle article for this study will be bottled water (Poland Springs).
Storage Conditions:	The vehicle article will be stored ambient upon receipt.
Characterization:	The vehicle article for this study is a marketed product and information is on file with the manufacturer.
Preparation:	The vehicle article will be received as ready to use by SRC.
Disposition:	The disposition of the vehicle article will be determined by the Sponsor upon completion of the study and documented in the study data.

9.3 Dose Preparation

Preparation:	The test article will be prepared by SRC based upon Sponsor-provided instructions (dilute 1 mL Coactiv+ Bluestem Oral Care Water Additive to 30 mL with Poland Springs bottled water). The method of preparation will be documented in the study data.
Frequency:	The test article will be prepared daily prior to dose administration.
Correction Factor:	No correction factor will be used for dose preparation.
Storage Conditions:	The test article will be stored ambient until dose administration.

10 Test System

This study will comply with all applicable sections of the Final Rules of the Animal Welfare Act regulations (Code of Federal Regulations, Title 9), the *Public Health Service Policy on Humane Care and Use of Laboratory Animals* from the Office of Laboratory Animal Welfare. Study procedures, including care of the animals, will be reviewed and approved by the SRC IACUC

Committee prior to study-related procedures. SRC is licensed by the United States Department of Agriculture and accredited by the Association for Assessment and Accreditation of Laboratory Animal Care (AAALAC), International.

10.1 Animal Identification, Housing, and Environmental Conditions

Species	<i>Canis familiaris</i>
Strain:	Beagle dog (naive)
Source:	SRC canine colony (Marshall BioResources)
Number/sex reserved:	36 (mixture of both sexes)
Number/sex placed:	32 (mixture of both sexes)
Target age:	1 to 4 years on Dosing Phase Day 1
Target weight:	6 to 12 kg on Dosing Phase Day 1
Randomization:	Animal selection and randomization procedures will be conducted by SRC personnel using Microsoft® Excel 2010 or newer version. Random numbers will be generated using the “Rand” function of Excel and will be captured using the “copy / paste special / values” commands. The “Rank” function in Excel will be used to assign animals to groups within blocks by random number. In addition, single factor ANOVA data analysis ($\alpha=0.05$) in Excel will be used to assess the outcomes of randomizations for homogeneity of variance (F statistic < F critical value) between groups. ANOVA will be conducted for body weight (measured prior to Dosing Phase Day 1) between staggered groups; and for plaque and gingival index scores (previously measured) and body weight (measured prior to Dosing Phase Day 1) between treatment groups within each staggered group. Randomization procedures may be repeated to achieve homogeneity of variance.
Identification:	Microchip (or other approved method) and cage card
Acclimation:	At least 14 days
Housing:	Stainless steel with self-spanned polyvinyl chloride (PVC)-coated expanded metal flooring.
Number per cage/pen:	One
Environmental conditions:	Per SRC SOPs ¹ except no type of soap, chemical agent, sanitizer, or disinfectant will be used for the daily cleaning of food and water bowls. Instead, food and water bowls will be cleaned daily with a scrub pad/brush and completely rinsed with SRC tap water. NOTE: Bowls, used to provide the test or vehicle article, will be labeled/marked accordingly for animal identification to minimize use for other treatment group. Only soap (e.g., Dawn) and/or water will be employed during sanitation procedures of housing room, cages, and bowls. Details of cleaning and sanitation procedures will be documented in the study data.

Enrichment	No chew toys or other dental treats will be provided to the dogs during this study. Psychological/environmental enrichment will be provided per SRC SOPs ¹ .
Photoperiod:	12 hours light / 12 hours dark

10.2 Diet and Water

Diet:	Type/Name	Purina Dog Chow (offered dry)
	Availability	Once daily per SRC SOPs ¹
Water:	Sources	Poland Springs bottled water
	Availability	<i>Ad libitum</i> excluding 30 ± 15 minutes prior to and following offering of daily diet.
	Comments	Drinking water, including the water additive product for designated animals, will be offered via stainless steel water bowls during the study.

Available analytical results of feed and water analysis will be maintained in the facility records. The feed and water are not expected to contain any contaminants that may interfere with the study.

10.3 Test System Justification

The dog is the target species for this product. Oral dosing (i.e., drinking) is the intended dose route which is selected for this study.

10.4 Veterinary Care and Medication

Animals will be examined by the veterinary staff as warranted by clinical signs or other changes. No medication, including oral hygiene products, will be used on this study unless recommended by an SRC veterinarian. Attempts will be made to consult with the Study Director and Sponsor for medication use or euthanasia when doing so will not cause undue pain and suffering to the animal. In case of emergency and the Study Director and Sponsor cannot be contacted, an SRC veterinarian will determine and provide the course of appropriate treatment for the animal and the Study Director will be informed as soon as possible. The Study Director will communicate medical interventions to the Sponsor in a timely manner and interventions deemed to be test article-related will be included in the final report. Non test article-related treatments will be retained in the raw data.

11 In-Life Procedures

11.1 Experimental Design

For this parallel dental study, animals will be divided into two Cohorts of N=16/group (negative control and test group) and receive either control diet only (Purina Dog Chow) or control diet plus chemical active ingredient in water for at least 35 days during the Dosing Phase (i.e., 28-day

evaluation period plus at least 7-day statistical analysis period). Following Dosing Phase Day 29 scoring, statistics will be performed and evaluated by the Sponsor within one week to determine whether the study animals continue through to the next 28-day evaluation event (i.e., Dosing Phase Day 57 scoring + 7-day statistical analysis period) or terminate in-life procedures by Dosing Phase Day 64. This step may be repeated a second time with an additional 28-day event (i.e., Dosing Phase Day 85) then terminate in-life procedures. This study can be terminated at any of the target time points (by Dosing Phase Day 36, 64, or 85) if the results up to that point are sufficient to demonstrate a strong enough statistical difference between test and vehicle articles (i.e., $\geq 20\%$ reduction).

Experimental Design Scheme

Group	1: Negative Control (16 animals) ^a	2: Test (16 animals) ^b
Acclimation Phase 7/8	Scale and polish teeth	
Acclimation Phase 14/15	Score plaque Randomize to study cohort (A or B) plus treatment group (Negative Control or Test) based on plaque score. Scale and polish teeth after scoring, so that plaque and calculus scores are zero at the start of the study.	
Dosing Phase Days 1 - 35	Feed control diet plus control water	Feed control diet plus coactiv+ water additive
Dosing Phase Day 29	Dental scores and photographs	
Dosing Phase Days 29 – 36	Statistical analysis and determination of study progression; continue assigned treatments.	
Optional Period 2: Days 36 - 64	Feed control diet plus control water	Feed control diet plus coactiv+ water additive
Dosing Phase Day 57	Dental scores and photographs	
Dosing Phase Days 57 - 64	Statistical analysis and determination of study progression; continue assigned treatments.	
Dosing Phase Days 64 - 85	Feed control diet plus control water	Feed control diet plus coactiv+ water additive
Dosing Phase Day 85	Dental scores and photographs	

^a Negative control = vehicle article (Poland Springs bottled water)

^b Test = Coactiv+ Bluestem Oral Care Water Additive diluted at 1 mL/30 mL of Poland Springs bottled water

11.2 Dose Level Justification

The dose level of the test article is the current label dose of the product to be administered to dogs (dilute 1 mL Coactiv+ Bluestem Oral Care Water Additive to 30 mL with water).

11.3 Masking

During the conduct of this study, dental scoring for gingivitis, plaque, and/or calculus will be performed by a masked (blinded) scorer.

11.4 Dose Administration

Frequency: Once daily beginning on Acclimation Phase Day 1 through termination

During the Acclimation Phase, all animals will be offered the vehicle article *ad libitum* (excluding 30 ± 15 minutes prior to and following offering of daily diet) via water bowl. During the Dosing Phase, study animals will be offered the test or vehicle article *ad libitum* via water bowl. Each water bowl will be labeled per study animal. Dosing procedures will be completed per SRC SOPs¹. Total amount offered and remaining per day will be documented for each study animals to calculated daily consumption per dog.

11.5 Mortality/Moribundity Observations

Frequency: Twice daily

In-cage observations will be made at least twice daily in the AM and PM (with at least 4 hours between observations) during the in-life study period to assess general health, mortality or moribundity. If an animal is observed to have clinical signs, an unscheduled clinical observation will be conducted and documented.

11.6 Physical Examinations

Frequency: Once during acclimation (prior to randomization)

Animals will be given a physical examination by an SRC veterinarian in accordance with SRC SOPs¹. Animals may be excluded from study selection based on findings of the acclimation physical exam.

11.7 Body Weights

Frequency: Twice during acclimation (Acclimation Phase Days 1 and 12 ± 1) and Dosing Phase Day 28 plus Dosing Phase Day(s) 56 and/or 84 (if required)

Body weight measurements will be performed according to SRC SOPs¹.

11.8 Food Consumption

Frequency: Quantitative, daily (starting by at least Acclimation Phase Day 10)

A quantitative assessment of food consumption will be taken daily starting by Acclimation Phase Day 10 through scheduled termination. Daily quantitative food consumption will be reported as grams/day/animal. Food consumption will be performed per SRC SOPs¹. Any animal exhibiting inappetence (<25 grams of control diet consumed per day) may be offered moist (canned) food and/or other therapy treatment(s) along with daily dry food offering until the expected dry food consumption is observed. Inappetence will be monitored as a therapy treatment under the direction of SRC's veterinary staff. Additional therapies and products will be documented.

NOTE: Water (including test article during Dosing Phase) will be withheld 30 ± 15 minutes prior to and after daily offering of dry diet.

11.9 Detailed Clinical Observations

Frequency: Once daily, starting on Dosing Phase Day 1 through scheduled termination

Detailed clinical observations will be performed according to SRC SOPs¹. If an animal is observed to have clinical signs outside of the scheduled observations, an unscheduled clinical observation will be conducted and documented.

11.10 Anesthesia

Frequency: Each dental procedure (Acclimation Phase Days 7/8 and 14/15 plus Dosing Phase Day 28 plus Dosing Phase Day(s) 56 and/or 84 (if required))

All dogs will be food fasted overnight (≥ 8 hours) prior to procedures that require anesthesia on at least each dental procedure. The dogs will be induced with propofol (target: 5 mg/kg, IV), and shall be maintained with inhaled isoflurane (0.5 to 5% in 100% oxygen), as needed. As needed, animals may be anesthetized via inhaled isoflurane at up to 5% concentration, and maintained at 0.5 to 5% concentration, as needed. All animals will be intubated for dentistry and scoring procedures. Details of all anesthesia procedures will be documented in the study data.

11.11 Dental Photographs

Frequency: Acclimation Phase Day 14/15 and Dosing Phase Day 29 plus Dosing Phase Day(s) 57 and/or 85 (if required)

Two-dimensional (2D) digital color photographs will be taken of each side of the dog's mouth following prophylaxis and/or dental scoring procedures. At a minimum, each image will include colored ruler, animal ID, and study day/date. Photography procedures and maintenance of collected images/recordings will be completed per SRC SOPs¹. Photographs will be taken for illustrative purposes will not be considered study data.

11.12 Dental Prophylaxis

Frequency: Acclimation Phase Days 7/8 and 14/15

The teeth will be scaled with an ultrasonic scaler on the buccal surfaces of at least maxillary I3, C, P3, P4, M1 and mandibular C, P3, P4, M1 (VOHC teeth). The teeth will then be sprayed with 2% eosin Y solution and gently rinsed with water from a spray bottle. If the teeth are not clean, re-scaling and re-polishing will be performed. The teeth will be polished with fine ground pumice/glycerin combination. When prophylaxis/scoring is complete the dogs will be recovered from anesthesia and extubated once the swallowing reflex returns. Prophylaxis will be performed by trained technicians and documented in study data.

11.13 Dental Scoring

Frequency: Acclimation Phase Day 14/15 and Dosing Phase Day 29 plus Dosing Phase Day(s) 57 and/or 85 (if required)

The buccal surfaces of the VOHC teeth and the adjacent gingiva and the other oral mucosal surfaces will be inspected. Dental scoring will be performed for gingivitis, plaque, and/or calculus. Presence or absence of inflammation, oral ulceration, and/or lacerations will be recorded in the study data at each scoring event.

Mary L. Berg, BS, LATG, RVT, VTS (Dentistry) will be the scorer for this study. The scorer will be blinded (masked) to treatment groups. The parameters will be measured in this order: gingivitis index, plaque, and calculus.

Gingival Index (once during Acclimation Phase 14/15 and Dosing Phase Day 29 plus Dosing Phase Day(s) 57 and/or 85 [if required]):

Gingival index will be assessed on maxillary C, P3, P4, I3, M1 and mandibular C, P3, P4, and M1 bilaterally.

Gingivitis will be measured according to a modified Loe and Silness Gingival Index. Gingivitis index will be measured by gently sweeping the sulcus of each tooth with a Michigan probe and assigning each tooth a score according to the following scale:

- 0 = No inflammation
- 1 = Inflammation
- 2 = Delayed bleeding with probing
- 3 = Immediate bleeding on probing
- 4 = Spontaneous and profuse bleeding on probing

The averages of all tooth scores will be taken to yield a whole mouth gingivitis mean score.

Plaque (once during Acclimation Phase 14/15 and Dosing Phase Day 29 plus Dosing Phase Day(s) 57 and/or 85 [if required]):

Plaque shall be disclosed (visualized) with 2% eosin solution that will be sprayed on the tooth as to not disturb the plaque layer for subsequent scorings. The teeth scored shall be bilaterally the maxillary C, P3, P4, I3, M1 and mandibular C, P3, P4, and M1. The teeth will be scored according

to the Logan, Boyce Method. The teeth will be divided into gingival and occlusal halves and assigned thickness and coverage scores, based upon the following scales:

Coverage:

- 0 = No plaque detected
- 1 = 1 to 24% Coverage
- 2 = 25 to 49% Coverage
- 3 = 50 to 74% Coverage
- 4 = 75 to 100% Coverage

Thickness:

- L = Light= pink to light red
- M = Medium= red
- D = Dark or Heavy= intense velvet red

The thickness score will be converted to a numerical score: L=1, M=2, and D=3. The coverage score will be multiplied by the thickness score, and the gingival and occlusal values for each tooth are added together to give the tooth score. The teeth scores will be averaged to yield the whole mouth mean plaque score.

Calculus (once during Acclimation Phase 14/15 and Dosing Phase Day 29 plus Dosing Phase Day(s) 57 and/or 85 [if required]):

Following plaque scoring, the disclosing agent (eosin) shall be removed with a toothbrush and then rinsed from the teeth using a dental air-water syringe. The teeth shall then be air dried to accommodate visualization of the calculus accumulation. A 2.5x ocular loop will be worn to help visualize the calculus deposits. The teeth scored shall be (bilaterally) the maxillary C, P3, P4, I3, M1 and mandibular C, P3, P4, and M1. The scoring method used will be a modified Warrick-Gorrel Method. The teeth will be divided into gingival and occlusal halves, and assigned thickness and coverage scores, based upon the following scales:

Thickness:

- L = Less than ½ mm thickness
- M = Between ½ mm to 1 mm thickness
- D = Greater than 1 mm thickness

Coverage:

- 0 = No detectable calculus
- 1 = Scattered calculus covering less than 24% of the buccal tooth surface
- 2 = Calculus covering between 25 and 49% of the buccal tooth surface
- 3 = Calculus covering between 50 and 74% of the buccal tooth surface
- 4 = Calculus covering more than 75% of the buccal tooth surface

The thickness score will be converted to a numerical score: L=1, M=2, and D=3. The coverage score will be multiplied by the thickness score, and the gingival and occlusal values for each

tooth are added together to give the tooth score. The teeth scores will be averaged to yield the whole mouth mean calculus score.

11.14 Animal Disposition

Following Dosing Phase Day 1, extra animals not placed on the study will be transferred to a Testing Facility open colony or training colony. The final disposition of each animal will be documented in the study data.

Following completion of all in-life procedures, study animals will be transferred to the Testing Facility open colony or training colony. The final disposition of each animal will be documented in the study data.

11.15 Unscheduled Death and Euthanasia

No euthanasia is scheduled for this study. For any animal found dead or euthanized *in extremis* after Dosing Phase Day 1, a gross macroscopic post-mortem examination will be conducted by/under the supervision of an SRC veterinarian as soon as possible. If necessary, animals will be euthanized by intravenous overdose of sodium pentobarbital per SRC SOPs¹ in accordance with the AVMA Panel on Euthanasia.²

Attempts will also be made to collect samples for clinical pathology analysis (i.e., hematology, coagulation, serum chemistry, and urine) from animals euthanized *in extremis*, when possible and if time permits.

If the post-mortem examination cannot be performed within two hours, the study animal will be stored refrigerated (2 to 8° C) until an examination can be performed. Following the gross necropsy, tissues may be collected, weighed, and/or preserved at the discretion of an SRC veterinarian.

Animals that have not yet received any test article will have a gross necropsy conducted, with tissue collected at the discretion of an SRC veterinarian.

12 Computerized Systems

The following critical computerized systems will be used in the study. The system used at the Test Site, including statistical analysis, will be presented in the appropriate section report/final report. All computerized systems used in the conduct of this study have been validated.

Critical Computerized Systems

System Name	Version No.	Description of Data Collected and/or Analyzed
Pristima®	7.4 or newer	Applicable in-life

13 Assessment of Effectiveness

Effectiveness Criteria:

The variables of interest include each dog's: 1) whole mouth gingival mean; 2) whole mouth plaque mean; and 3) whole mouth mean calculus score.

Descriptive summary tables will be generated for each of the variables, including means and standard deviations/errors as appropriate, with percent reduction in scores using the following formula: % reduction = (control group mean – treatment group mean) / control group mean

14 Statistical Analysis

Compare test article treatment with respective control treatment in parallel group fashion:

Table of Statistical Comparisons	
Control Group	Comparison Group
1 (Negative Control)	2 (Test)

The following methods will be used to analyze plaque, gingival index, and calculus. Analyses will be conducted separately for each dosing phase (Days 29, 57 and 85), as appropriate.

A preliminary evaluation of normality will be conducted through a combination of visual inspection of the data, inferential tests, and residual plots. Taking into account the robustness of the analysis of variance (ANOVA) model, the principal investigator for statistical analysis will determine whether the analysis will be conducted on the original data values or a nonparametric rank transformation.

Following the preliminary evaluation of the data, an ANOVA model with a fixed effect term for treatment group will be used for analysis. The outcome of the treatment group effect will serve as a comparison to the treated group with the control.

All statistical tests will be two-sided at the 5% significance level. All statistical analyses will be conducted using SAS® software version 9.4 or higher.

Statistical Principal Investigator:
Les Freshwater, MS
BioSTAT Consultants
23111 64th Ave
Mattawan, MI 49071
Email: lesfreshwater@biostat.net
Office: (269) 329-7976

15 Study Data and Records

All study data and study records required to reconstruct the study will be maintained. Records to be maintained will include, but are not limited to: animal receipts, environmental conditions, test

article records, dosing procedures, sampling and processing procedures, storage conditions for test article and samples; instrument identification numbers and parameters, instrument books detailing calibration (including daily scale calibrations) and maintenance.

16 Reports

The in-life study procedures, methods, results, interpretation and conclusion will be provided in the final report.

The Sponsor will receive an electronic copy of the draft report for review. The electronic version of the final report (hyperlinked, bookmarked PDF) will be provided to the Sponsor.

16.1 Electronic Reporting

A SEND dataset will not be provided.

17 Archival

Test Article and Vehicle: Retention samples are not required.

Study Samples: Any samples collected will be maintained under the appropriate storage conditions at their respective site(s) until completion of analyses or sample expiration.

Final Report, Protocol, and Study Data: An electronic PDF of the final report will be provided to the Sponsor. An electronic version of the final report and contributor report (external), wet ink report signature pages, original protocol (including amendments and deviations), and original study data (electronic or paper) will be archived by SRC (or an approved archive subcontractor) for one year following study completion. The archival location will be included in the final report. After the scheduled archival period, the Sponsor shall determine if archival will continue (at additional cost), or if materials are to be shipped to a Sponsor-designated location.

Electronic data generated by SRC will be archived, and the software and hardware required to produce it in a readable form will be maintained and available.

Facility Records: The facility records will be archived at each Test Site (as applicable) according to Test Site's SOPs.

Protocol Amendment

Evaluation of the Effectiveness of a Test Compound on the Reduction of Plaque and Calculus in Adult Dogs for a Chemical Claim for the VOHC Seal	
Study Number: 020140.001	Amendment #: 1
Testing Facility: Sinclair Research Center, LLC	Effective Date: Date of Study Director signature
Sponsor: STEM Animal Health	Sponsor Study Number: 001.2021

Changes to the protocol are presented as follows: additions are **bolded** and deletions are ~~strikeouts~~.

A. Section: 2 Proposed Study Schedule (Page 4)

This section will be amended as follows:

Proposed study dates are listed below. Actual applicable dates will be included in the final report.

Animal Arrival / Transfer:	~~12~~ 13 -JAN-2021
Start of Acclimation:	~~12~~ 13 -JAN-2021 (First date of study-specific data collection)
Initiation of Dosing:	~~26~~ 27 -JAN-2021
Completion of In-life (two staggered cohorts):	~~02/03/04~~ 04 -MAR-2021 (Dosing Phase Day 36) ~~30/31~~ 31 MAR/ 01 APR 2021 (Dosing Phase Day 64, if needed) ~~20/21/22~~ 22 APR 2021 (Dosing Phase Day 85, if needed)
Draft Report	10 weeks following end of in life

Reason: To correct typographical errors in study schedule dates.

Study Director:

A handwritten signature in black ink, appearing to read 'Timothy J. [unclear]', written over a horizontal line.

Date:

12 Jan 2021

Sponsor/Monitor Approval:

The amendment was approved by the Sponsor or Monitor via email on the date specified.

12 JAN 2021

Protocol Amendment

Evaluation of the Effectiveness of a Test Compound on the Reduction of Plaque and Calculus in Adult Dogs for a Chemical Claim for the VOHC Seal	
Study Number: 020140.001	Amendment #: 2
Testing Facility: Sinclair Research Center, LLC	Effective Date: Date of Study Director signature
Sponsor: STEM Animal Health	Sponsor Study Number: 001.2021

Changes to the protocol are presented as follows: additions are **bolded** and deletions are ~~strikeouts~~.

A. Section: 11.10 Anesthesia (Page 12)

This section will be amended as follows:

All dogs will be food fasted overnight (≥ 8 hours) prior to procedures that require anesthesia on at least each dental procedure. The dogs will be induced with propofol (target: 5 mg/kg, IV, **more propofol may be needed and should be given to effect**) and shall be maintained with inhaled isoflurane (0.5 to 5% in 100% oxygen), as needed. As needed, animals may be anesthetized via inhaled isoflurane at up to 5% concentration, and maintained at 0.5 to 5% concentration, as needed. All animals will be intubated for dentistry and scoring procedures. Details of all anesthesia procedures will be documented in the study data.

Reason: To clarify the use of additional propofol to properly induce study animals.

B. Section: 11.13 Dental Scoring (Pages 13-15)

The calculus scoring in this section will be amended as follows:

Thickness:

Z = Zero

L = ~~Less~~ **Greater than zero but less** than $\frac{1}{2}$ mm thickness

M = Between $\frac{1}{2}$ mm to 1 mm thickness

D = Greater than 1 mm thickness

Coverage:

0 = No detectable calculus

1 = Scattered calculus covering less than 24% of the buccal tooth surface

2 = Calculus covering between 25 and 49% of the buccal tooth surface

3 = Calculus covering between 50 and 74% of the buccal tooth surface

4 = Calculus covering more than 75% of the buccal tooth surface

The thickness score will be converted to a numerical score: Z=0, L=1, M=2, and D=3. The coverage score will be multiplied by the thickness score, and the gingival and occlusal values for each tooth are added together to give the tooth score. The teeth scores will be averaged to yield the whole mouth mean calculus score.

Reason: To clarify the use of zero in calculus scoring.

Study Director:

Date:

17 Feb 2021

Sponsor/Monitor Approval:

The amendment was approved by the Sponsor or Monitor via email on the date specified.

17 FEB 2021

Protocol Amendment

Evaluation of the Effectiveness of a Test Compound on the Reduction of Plaque and Calculus in Adult Dogs for a Chemical Claim for the VOHC Seal	
Study Number: 020140.001	Amendment #: 3
Testing Facility: Sinclair Research Center, LLC	Effective Date: Date of Study Director signature
Sponsor: STEM Animal Health	Sponsor Study Number: 001.2021

Changes to the protocol are presented as follows: additions are **bolded** and deletions are ~~strikeouts~~.

A. Section: 11.1 Experimental Design (Pages 9 and 10)

The first paragraph in this section will be amended as follows:

For this parallel dental study, animals will be divided into two Cohorts of N=16/group (negative control and test group) and receive either control diet only (Purina Dog Chow) or control diet plus chemical active ingredient in water for at least 35 days during the Dosing Phase (i.e., 28-day evaluation period plus at least 7-day statistical analysis period). Following Dosing Phase Day 29 scoring, statistics will be performed and evaluated by ~~the Sponsor SRC and/or BioSTAT Consultants~~ within one week to determine whether the study animals continue through to the next 28-day evaluation event (i.e., Dosing Phase Day 57 scoring + 7-day statistical analysis period) or terminate in-life procedures by Dosing Phase Day 64. This step may be repeated a second time with an additional 28-day event (i.e., Dosing Phase Day 85) then terminate in-life procedures. This study can be terminated at any of the target time points (by Dosing Phase Day 36, 64, or 85) if the results up to that point are sufficient to demonstrate a strong enough statistical difference between test and vehicle articles (i.e., $\geq 20\%$ reduction).

Reason: To clarify who will generate statistics of Dosing Phase Day(s) 29 and/or 56 dental scores for sponsor's assessment to extend/terminate in-life procedures.

Study Director:

A handwritten signature in black ink, appearing to read 'Timothy J. Mader', is written over a horizontal line.

26 FEB 2021

Protocol Amendment

Evaluation of the Effectiveness of a Test Compound on the Reduction of Plaque and Calculus in Adult Dogs for a Chemical Claim for the VOHC Seal	
Study Number: 020140.001	Amendment #: 4
Testing Facility: Sinclair Research Center, LLC	Effective Date: Date of Study Director signature
Sponsor: STEM Animal Health	Sponsor Study Number: 001.2021

Changes to the protocol are presented as follows: additions are **bolded** and deletions are strikeouts.

A. Section: 11.13 Dental Scoring (Pages 13-15)

The plaque scoring in this section will be amended as follows:

Coverage:

- 0 = No plaque detected
- 1 = 1 to 24% Coverage
- 2 = 25 to 49% Coverage
- 3 = 50 to 74% Coverage
- 4 = 75 to 100% Coverage

Thickness:

- Z = Zero = no color detected**
- L = Light= pink to light red
- M = Medium= red
- D = Dark or Heavy= intense velvet red

The thickness score will be converted to a numerical score: **Z=0**, L=1, M=2, and D=3. The coverage score will be multiplied by the thickness score, and the gingival and occlusal values for each tooth are added together to give the tooth score. The teeth scores will be averaged to yield the whole mouth mean plaque score.

Reason: To clarify the use of zero in plaque scoring.

Study Director:

A handwritten signature in black ink, appearing to read 'Tommy J. [unclear]', is written over a horizontal line.

Date:

Study: 020140.001

StudyTitle: Evaluation of the Effectiveness of a Test Compound on the Reduction of Plaque and Calculus in Adult Dogs for a Chemical...

Test Article: Coactiv+ Water Additive, Poland Springs Bottled Water

Dog/Beagle

Efficacy/Dental

Study Phase: Acclimation Phase Day of Phase: 1 Session:1 Scheduled Animal Room

Pretest #	Sex	Group	Parameter Name	Data Entry
3974032	F	-	Reproductive Status	Intact
			Skin / Coat Condition:	Normal
			Ears / Nose Condition:	Normal
			Ocular Condition:	Normal
			Oral Cavity and Mucous Membranes Condition:	Abnormal - describe in comment
			Comments: Moderate tartar	
			Respiratory Condition:	Normal
			Cardiovascular Condition:	Normal
			Abdominal / GI Condition:	Normal
			Genitourinary / Mammary Condition:	Normal
			Lymph Nodes (Observable) Condition:	Normal
			Neurological Condition:	Normal
			Musculoskeletal Condition:	Normal
			Behavioral Assessment:	Normal

Efficacy/Dental

Animal #	Sex	Group	Category, Observation	Days Seen
1007:3924573	M	1	No Abnormalities Detected	Dosing Phase: 1
			Physical Condition (Observation), discoloration, forefoot (right), mild, dark	Dosing Phase: 60, 61, 62, 63, 64, 65, 66
			Physical Condition (Observation), discoloration, forelimb (lower, right), moderate, purple	Dosing Phase: 30, 31, 32, 33
			Physical Condition (Observation), discoloration, oral cavity (entire inner mouth), mild, yellow	Dosing Phase: 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63, 64, 65, 66, 67, 68, 69, 70, 71, 72, 73, 74, 75, 76, 77, 78, 79, 80, 81, 82, 83, 84, 85
			Physical Condition (Observation), erythema, Abdominal Surface, mild	Dosing Phase: 2
			Physical Condition (Observation), erythema, ear (left), mild	Dosing Phase: 38
			Physical Condition (Observation), erythema, ears (both), mild	Dosing Phase: 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 18, 19, 20, 21, 35, 36, 39, 40, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63, 64, 65, 66, 67, 68, 69, 70, 71, 72, 73, 74, 75, 76, 77, 78, 79, 80, 81, 82, 83, 84, 85

Animal #	Sex	Group	Category, Observation	Days Seen
1009:3927327	M	1	Excretions, abnormal urine, mild, yellow	Dosing Phase: 17, 18, 19, 20, 23
			Excretions, discharge, ear (left), mild, black	Dosing Phase: 78, 79, 80, 81
			Excretions, salivation, mild, increased, watery	Dosing Phase: 84, 85
			Excretions, vomitus, mild, medium, food / food-like	Dosing Phase: 66
			Physical Condition (Observation), abnormal hair / fur, dorsal surface, mild, ruffled	Dosing Phase: 3, 4, 5, 6, 7, 8
			Physical Condition (Observation), discoloration, gingiva, mild, pale	Dosing Phase: 1, 73, 74, 75
			Physical Condition (Observation), discoloration, oral cavity (entire inner mouth), mild, brown	Dosing Phase: 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32
			Physical Condition (Observation), discoloration, oral cavity (entire inner mouth), mild, yellow	Dosing Phase: 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63, 64, 65, 66, 67, 68, 69, 70, 71, 72, 73, 74, 75, 76, 77, 78, 79, 80, 81, 82, 83, 84, 85
			Physical Condition (Observation), erythema, ear (left), mild	Dosing Phase: 48, 49, 50, 51, 52, 53
			Physical Condition (Observation), erythema, ear (right), mild	Dosing Phase: 65
			Physical Condition (Observation), erythema, ears (both), mild	Dosing Phase: 47, 58
			Physical Condition (Observation), erythema, gingiva, mild	Dosing Phase: 21, 22, 23, 76, 77, 78, 79, 80, 81, 82, 83, 84, 85
			Physical Condition (Observation), erythema, lip (upper), mild	Dosing Phase: 24, 25, 26, 27
			Physical Condition (Observation), erythema, lips (both), mild	Dosing Phase: 34, 35
			Physical Condition (Observation), erythema, nose, mild	Dosing Phase: 25, 26, 27

StudyTitle: Evaluation of the Effectiveness of a Test Compound on the Reduction of Plaque and Calculus in Adult Dogs for a Chemical...

Test Article: Coactiv+ Water Additive, Poland Springs Bottled Water

Dog/Beagle

Efficacy/Dental

Study Phase: Dosing Phase **Day of Phase:** 6 **Session:** 1 Scheduled

Study #	Sex	Group	Clinical Signs / Comments
2007:3932312	M	2	Physical Condition (Observation), discoloration, oral cavity (entire inner mouth), mild, yellow Finding comment: various teeth. Excretions, salivation, mild, increased, clear, watery
2010:3914365	M	2	Physical Condition (Observation), abnormal hair / fur, cheek (left), mild, absent Physical Condition (Observation), erythema, forelimb (left), mild Physical Condition (Observation), thin, mild Physical Condition (Observation), Scab(s), ear (right), mild, focal, closed Finding comment: tip of the ear.
2011:3998178	M	2	Physical Condition (Observation), Scab(s), nose, mild, focal, closed Behavior, vocalization, mild
2012:3936270	M	2	Physical Condition (Observation), thin, mild Excretions, abnormal feces, moderate, brown, watery Finding comment: with red tinged liquid Physical Condition (Observation), erythema, forelimb (upper, left), mild Physical Condition (Observation), abnormal hair / fur, dorsal surface, moderate, ruffled
2013:3935478	M	2	Physical Condition (Observation), erythema, gingiva, mild Physical Condition (Observation), erythema, ears (both), mild
2016:3914102	M	2	Physical Condition (Observation), erythema, gingiva, moderate
1503:3939708	F	1	Physical Condition (Observation), erythema, ears (both), mild

StudyTitle: Evaluation of the Effectiveness of a Test Compound on the Reduction of Plaque and Calculus in Adult Dogs for a Chemical...

Test Article: Coactiv+ Water Additive, Poland Springs Bottled Water

Dog/Beagle

Efficacy/Dental

Study Phase: Dosing Phase **Day of Phase:** 9 **Session:** 1 Scheduled

Study #	Sex	Group	Clinical Signs / Comments
2509:3938795	F	2	Physical Condition (Observation), erythema, ears (both), mild Excretions, discharge, eyes (both), mild, yellow, mucoid
2514:4225652	F	2	Physical Condition (Observation), erythema, ears (both), moderate Physical Condition (Observation), discoloration, oral cavity (entire inner mouth), mild, yellow Finding comment: teeth, slight yellowing Physical Condition (Observation), erythema, forelimb (lower, right), mild
2515:3873651	F	2	Physical Condition (Observation), abnormal hair / fur, lateral surface (right), mild, thinning Physical Condition (Observation), erythema, gingiva, mild Physical Condition (Observation), discoloration, oral cavity (entire inner mouth), mild, yellow Finding comment: teeth, yellowing Excretions, discharge, eye (left), mild, yellow, mucoid

Test Article: Coactiv+ Water Additive, Poland Springs Bottled Water

Dog/Beagle

Efficacy/Dental

Study Phase: Dosing Phase **Day of Phase:** 16 **Session:** 1 Scheduled

Study #	Sex	Group	Clinical Signs / Comments
1006:3939007	M	1	Physical Condition (Observation), discoloration, oral cavity (entire inner mouth), mild, yellow Finding comment: teeth are yellow Physical Condition (Observation), erythema, Abdominal Surface, mild Physical Condition (Observation), thin, mild
1007:3924573	M	1	Physical Condition (Observation), erythema, gingiva, mild Physical Condition (Observation), erythema, ears (both), mild Physical Condition (Observation), discoloration, oral cavity (entire inner mouth), mild, yellow Finding comment: teeth are yellow Physical Condition (Observation), flaking / sloughing, dorsal surface, mild
1009:3927327	M	1	Physical Condition (Observation), flaking / sloughing, dorsal surface, moderate Physical Condition (Observation), discoloration, oral cavity (entire inner mouth), mild, brown Finding comment: teeth, slight browning Physical Condition (Observation), thin, mild
1011:3921973	M	1	Physical Condition (Observation), abnormal hair / fur, lateral surface (left), mild, amber, thinning Physical Condition (Observation), discoloration, oral cavity (entire inner mouth), mild, yellow Finding comment: teeth yellowing

Study: 020140.001

StudyTitle: Evaluation of the Effectiveness of a Test Compound on the Reduction of Plaque and Calculus in Adult Dogs for a Chemical...

Test Article: Coactiv+ Water Additive, Poland Springs Bottled Water

Dog/Beagle

Efficacy/Dental

Study Phase: Dosing Phase **Day of Phase:** 21 **Session:** 1 Scheduled

Study #	Sex	Group	Clinical Signs / Comments
1009:3927327	M	1	Physical Condition (Observation), erythema, gingiva, mild
1011:3921973	M	1	Physical Condition (Observation), discoloration, oral cavity (entire inner mouth), mild, yellow Finding comment: teeth yellowing Physical Condition (Observation), abnormal hair / fur, lateral surface (left), mild, thinning Finding comment: Shoulder region.
1012:3925987	M	1	Physical Condition (Observation), erythema, gingiva, mild Physical Condition (Observation), discoloration, oral cavity (entire inner mouth), mild, yellow Finding comment: teeth yellowing Physical Condition (Observation), thin, mild Physical Condition (Observation), flaking / sloughing, dorsal surface, mild
1013:3938281	M	1	Physical Condition (Observation), thin, mild Physical Condition (Observation), discoloration, oral cavity (entire inner mouth), mild, yellow Finding comment: teeth, yellowing Physical Condition (Observation), erythema, ear (right), mild Finding comment: Pinna region. Physical Condition (Observation), Scab(s), head, mild
1014:3873413	M	1	Physical Condition (Observation), abnormal hair / fur, forefoot (right), mild, absent Physical Condition (Observation), thin, mild

StudyTitle: Evaluation of the Effectiveness of a Test Compound on the Reduction of Plaque and Calculus in Adult Dogs for a Chemical...

Test Article: Coactiv+ Water Additive, Poland Springs Bottled Water

Dog/Beagle

Efficacy/Dental

Study Phase: Dosing Phase **Day of Phase:** 24 **Session:** 1 Scheduled

Study #	Sex	Group	Clinical Signs / Comments
2005:3933068	M	2	Physical Condition (Observation), discoloration, oral cavity (entire inner mouth), mild, yellow Finding comment: teeth, slight yellow Physical Condition (Observation), flaking / sloughing, dorsal surface, mild Excretions, discharge, ear (right), mild, brown
2007:3932312	M	2	Physical Condition (Observation), thin, mild Physical Condition (Observation), flaking / sloughing, dorsal surface, mild Physical Condition (Observation), erythema, ears (both), moderate Physical Condition (Observation), erythema, gingiva, mild
2010:3914365	M	2	Physical Condition (Observation), abnormal hair / fur, cheek (left), mild, thinning Physical Condition (Observation), thin, mild Physical Condition (Observation), discoloration, oral cavity (entire inner mouth), mild, yellow Finding comment: teeth, yellowing Physical Condition (Observation), abnormal hair / fur, forelimb (upper, right), mild, brown, thinning Finding comment: Distal elbow region.
2011:3998178	M	2	Physical Condition (Observation), thin, mild Physical Condition (Observation), discoloration, oral cavity (entire inner mouth), mild, yellow Finding comment: teeth, yellowing

Study: 020140.001

StudyTitle: Evaluation of the Effectiveness of a Test Compound on the Reduction of Plaque and Calculus in Adult Dogs for a Chemical...

Test Article: Coactiv+ Water Additive, Poland Springs Bottled Water

Dog/Beagle

Efficacy/Dental

Study Phase: Dosing Phase **Day of Phase:** 26 **Session:** 1 Scheduled

Study #	Sex	Group	Clinical Signs / Comments
1016:3937382	M	1	Physical Condition (Observation), discoloration, oral cavity (entire inner mouth), mild, yellow Finding comment: teeth, yellowing Physical Condition (Observation), flaking / sloughing, dorsal surface, mild Physical Condition (Observation), erythema, gingiva, mild
1010R:3926304	M	1	Physical Condition (Observation), flaking / sloughing, dorsal surface, mild Physical Condition (Observation), discoloration, oral cavity (entire inner mouth), mild, yellow Finding comment: teeth, yellowing Excretions, discharge, eyes (both), mild, brown, liquid (wet)
2002:4231326	M	2	Physical Condition (Observation), erythema, gingiva, mild Physical Condition (Observation), discoloration, oral cavity (entire inner mouth), mild, yellow Finding comment: teeth, slight yellowing Physical Condition (Observation), erythema, testes (both), mild Physical Condition (Observation), abnormal hair / fur, tail, mild, ruffled Physical Condition (Observation), abnormal hair / fur, testes (both), mild, thinning Excretions, discharge, eye (left), mild, liquid (wet)
2003:3924328	M	2	Excretions, discharge, eyes (both), mild, brown, liquid (wet)

Test Article: Coactiv+ Water Additive, Poland Springs Bottled Water

Dog/Beagle

Efficacy/Dental

Study Phase: Dosing Phase **Day of Phase:** 47 **Session:** 1 Scheduled

Study #	Sex	Group	Clinical Signs / Comments
1001:4229658	M	1	Physical Condition (Observation), discoloration, oral cavity (entire inner mouth), mild, brown Finding comment: teeth are discolored Physical Condition (Observation), erythema, gingiva, mild Physical Condition (Observation), flaking / sloughing, dorsal surface, mild
1002:3930956	M	1	Physical Condition (Observation), discoloration, oral cavity (entire inner mouth), mild, yellow Finding comment: teeth, slight yellowing Eyes, redness, eyes - sclera (both), mild Physical Condition (Observation), erythema, ears (both), mild Physical Condition (Observation), abnormal hair / fur, forelimb (lower, right), mild, thinning
1004:3925201	M	1	Physical Condition (Observation), erythema, gingiva, mild Physical Condition (Observation), discoloration, oral cavity (entire inner mouth), mild, yellow Finding comment: teeth are yellow
1005:3937373	M	1	Physical Condition (Observation), discoloration, oral cavity (entire inner mouth), mild, yellow Finding comment: teeth are yellow Excretions, discharge, eyes (both), mild, liquid (wet)
1006:3939007	M	1	Physical Condition (Observation), flaking / sloughing, dorsal surface, mild

Study: 020140.001

StudyTitle: Evaluation of the Effectiveness of a Test Compound on the Reduction of Plaque and Calculus in Adult Dogs for a Chemical...

Test Article: Coactiv+ Water Additive, Poland Springs Bottled Water

Dog/Beagle

Efficacy/Dental

Study Phase: Dosing Phase **Day of Phase:** 60 **Session:** 1 Scheduled

Study #	Sex	Group	Clinical Signs / Comments
1014:3873413	M	1	Physical Condition (Observation), erythema, ears (both), mild Physical Condition (Observation), abnormal hair / fur, forefeet (both), mild, thinning Finding comment: erythema
1016:3937382	M	1	Physical Condition (Observation), discoloration, oral cavity (entire inner mouth), mild, yellow Finding comment: teeth, yellowing Physical Condition (Observation), erythema, gingiva, mild
1010R:3926304	M	1	Physical Condition (Observation), flaking / sloughing, dorsal surface, mild Physical Condition (Observation), discoloration, oral cavity (entire inner mouth), mild, yellow Finding comment: teeth, yellowing Physical Condition (Observation), erythema, ears (both), mild Physical Condition (Observation), erythema, gingiva, mild
2002:4231326	M	2	Physical Condition (Observation), discoloration, oral cavity (entire inner mouth), mild, yellow Finding comment: teeth, slight yellowing Physical Condition (Observation), erythema, ears (both), mild Finding comment: right ear warm to the touch Physical Condition (Observation), erythema, gingiva, mild
2003:3924328	M	2

Study: 020140.001

StudyTitle: Evaluation of the Effectiveness of a Test Compound on the Reduction of Plaque and Calculus in Adult Dogs for a Chemical...

Test Article: Coactiv+ Water Additive, Poland Springs Bottled Water

Dog/Beagle

Efficacy/Dental

Study Phase: Dosing Phase **Day of Phase:** 65 **Session:** 1 Scheduled

Study #	Sex	Group	Clinical Signs / Comments
2005:3933068	M	2	Physical Condition (Observation), abnormal hair / fur, dorsal surface, mild, ruffled
2007:3932312	M	2	Physical Condition (Observation), erythema, ears (both), moderate Physical Condition (Observation), erythema, gingiva, mild
2010:3914365	M	2	Physical Condition (Observation), discoloration, oral cavity (entire inner mouth), mild, yellow Finding comment: teeth, yellowing Physical Condition (Observation), erythema, gingiva, mild Physical Condition (Observation), abnormal hair / fur, hip (both), mild, ruffled
2011:3998178	M	2	Physical Condition (Observation), discoloration, oral cavity (entire inner mouth), mild, yellow Finding comment: teeth, yellowing Physical Condition (Observation), discoloration, gingiva, mild, pale Physical Condition (Observation), thin, moderate
2012:3936270	M	2	Physical Condition (Observation), discoloration, oral cavity (entire inner mouth), moderate, yellow Finding comment: teeth, yellowing Physical Condition (Observation), abnormal hair / fur, dorsal surface, moderate, ruffled Physical Condition (Observation), erythema, gingiva, mild Physical Condition (Observation), flaking / sloughing, dorsal surface, severe Finding comment: whole body Physical Condition (Observation), erythema, ears (both), mild

Study: 020140.001

StudyTitle: Evaluation of the Effectiveness of a Test Compound on the Reduction of Plaque and Calculus in Adult Dogs for a Chemical...

Test Article: Coactiv+ Water Additive, Poland Springs Bottled Water

Dog/Beagle

Efficacy/Dental

Study Phase: Dosing Phase **Day of Phase:** 71 **Session:** 1 Scheduled

Study #	Sex	Group	Clinical Signs / Comments
2515:3873651	F	2	Physical Condition (Observation), erythema, Abdominal Surface, mild Finding comment: on the inside of the left hindleg and hip. Physical Condition (Observation), erythema, ears (both), mild Finding comment: inside ear canal Physical Condition (Observation), abnormal hair / fur, Abdominal Surface, mild Finding comment: erythema, on the right knee

Test Article: Coactiv+ Water Additive, Poland Springs Bottled Water

Dog/Beagle

Efficacy/Dental

Study Phase: Dosing Phase **Day of Phase:** 76 **Session:** 1 Scheduled

Study #	Sex	Group	Clinical Signs / Comments
2016:3914102	M	2	Physical Condition (Observation), flaking / sloughing, dorsal surface, moderate Physical Condition (Observation), erythema, gingiva, mild Physical Condition (Observation), erythema, ears (both), mild Excretions, salivation, mild, increased, clear, watery
1503:3939708	F	1	Physical Condition (Observation), erythema, gingiva, mild Physical Condition (Observation), discoloration, gingiva, mild, pale
1508:4173156	F	1	Physical Condition (Observation), erythema, gingiva, mild Physical Condition (Observation), erythema, ear (right), mild Finding comment: inside of the ear.
1515:3974032	F	1	Physical Condition (Observation), discoloration, oral cavity (entire inner mouth), mild, yellow Finding comment: teeth, slight yellowing Physical Condition (Observation), erythema, ears (both), mild Physical Condition (Observation), scar(s) Finding comment: scar on nose. Physical Condition (Observation), discoloration, gingiva, mild, dark
2501:3932738	F	2	Physical Condition (Observation), discoloration, oral cavity (entire inner mouth), mild, yellow Finding comment: very slight yellowing of teeth Physical Condition (Observation), erythema, gingiva, mild Physical Condition (Observation), corpulent, mild

Test Article: Coactiv+ Water Additive, Poland Springs Bottled Water

Dog/Beagle

Efficacy/Dental

Study Phase: Dosing Phase **Day of Phase:** 81 **Session:** 1 Scheduled

Study #	Sex	Group	Clinical Signs / Comments
1013:3938281	M	1	Physical Condition (Observation), discoloration, oral cavity (entire inner mouth), mild, yellow Finding comment: teeth, yellowing Physical Condition (Observation), thin, severe Physical Condition (Observation), erythema, ears (both), mild Finding comment: inside ear canal
1014:3873413	M	1	Physical Condition (Observation), discoloration, oral cavity (entire inner mouth), mild, yellow Finding comment: teeth, yellowing Physical Condition (Observation), flaking / sloughing, dorsal surface, mild Physical Condition (Observation), erythema, ears (both), moderate Physical Condition (Observation), abnormal hair / fur, forefeet (both), mild, thinning Physical Condition (Observation), thin, mild
1016:3937382	M	1	Physical Condition (Observation), discoloration, oral cavity (entire inner mouth), mild, brown Physical Condition (Observation), erythema, gingiva, mild Physical Condition (Observation), flaking / sloughing, dorsal surface, mild
1010R:3926304	M	1	Physical Condition (Observation), flaking / sloughing, entire body, moderate Physical Condition (Observation), discoloration, oral cavity (entire inner mouth), mild, yellow Finding comment: teeth, yellowing

Dog/Beagle

Efficacy/Dental

Study Phase: Dosing Phase **Day of Phase:** 82 **Session:** 1 Scheduled

Study #	Sex	Group	Clinical Signs / Comments
1515:3974032	F	1	Physical Condition (Observation), discoloration, oral cavity (entire inner mouth), mild, yellow Finding comment: teeth, slight yellowing Physical Condition (Observation), erythema, ears (both), mild Physical Condition (Observation), abrasion, nostril (right), mild, unknown genesis Physical Condition (Observation), discoloration, gingiva, mild, dark
2501:3932738	F	2	Physical Condition (Observation), discoloration, oral cavity (entire inner mouth), mild, yellow Finding comment: very slight yellowing of teeth Physical Condition (Observation), erythema, gingiva, mild Excretions, discharge, eyes (both), mild, brown, liquid (wet)
2506:4225393	F	2	Physical Condition (Observation), erythema, gingiva, mild Physical Condition (Observation), discoloration, oral cavity (entire inner mouth), mild, yellow Finding comment: teeth are yellowing Physical Condition (Observation), abnormal hair / fur, lateral surface (left), mild, thinning Physical Condition (Observation), abnormal hair / fur, lateral surface (right), mild, thinning Physical Condition (Observation), abnormal hair / fur, hip (right), mild, thinning Physical Condition (Observation), abnormal hair / fur, hindlimb (lower, left), mild, thinning Finding comment: on the knee area Behavior, itching, lateral surface (right), mild Finding comment: scratching at right side

Test Article: Coactiv+ Water Additive, Poland Springs Bottled Water

Dog/Beagle

Efficacy/Dental

Study Phase: Dosing Phase **Day of Phase:** 85 **Session:** 1 Scheduled

Study #	Sex	Group	Clinical Signs / Comments
2506:4225393	F	2	Physical Condition (Observation), discoloration, oral cavity (entire inner mouth), mild, yellow Finding comment: teeth are yellowing Physical Condition (Observation), abnormal hair / fur, lateral surface (left), mild, thinning Physical Condition (Observation), abnormal hair / fur, lateral surface (right), mild, thinning Physical Condition (Observation), abnormal hair / fur, hip (right), mild, thinning Physical Condition (Observation), abnormal hair / fur, hindlimb (lower, left), mild, thinning Finding comment: on the knee area
2508:3919847	F	2	Physical Condition (Observation), discoloration, oral cavity (entire inner mouth), mild, yellow Finding comment: teeth, yellowing Physical Condition (Observation), erythema, gingiva, mild Physical Condition (Observation), abnormal hair / fur, tail, mild, ruffled Finding comment: base of tail Physical Condition (Observation), erythema, ears (both), mild Finding comment: ears are warm to the touch Physical Condition (Observation), flaking / sloughing, dorsal surface, mild Excretions, discharge, vagina, mild, red
2509:3938795	F	2	Physical Condition (Observation), discoloration, oral cavity (entire inner mouth), moderate, yellow Finding comment: Teeth yellowing. Physical Condition (Observation), discoloration, gingiva, mild, dark

Study #	Sex	Group	Clinical Signs / Comments
2509:3938795	F	2	Physical Condition (Observation), erythema, ears (both), mild Physical Condition (Observation), corpulent, mild, body condition score = 3
2514:4225652	F	2	Physical Condition (Observation), erythema, gingiva, mild Excretions, discharge, eyes (both), mild, clear, liquid (wet) Physical Condition (Observation), erythema, ears (both), mild Physical Condition (Observation), flaking / sloughing, Abdominal Surface, mild Physical Condition (Observation), erythema, Abdominal Surface, mild
2515:3873651	F	2	Physical Condition (Observation), discoloration, oral cavity (entire inner mouth), mild, yellow Finding comment: teeth, yellowing Physical Condition (Observation), erythema, gingiva, mild Physical Condition (Observation), erythema, Abdominal Surface, mild Finding comment: on the inside of the both hindlegs and hip. Physical Condition (Observation), erythema, ears (both), mild Finding comment: inside ear canal

Table 5 Individual Animal Plaque Scores

Pristima Generated Report Title	Number of Pages
Dental Scoring (Plaque) Report with Individual Values	216

Logan and Boyce Method		
Category	Score	Description
Coverage	0	No plaque detected
	1	1 to 24% Coverage
	2	25 to 49% Coverage
	3	50 to 74% Coverage
	4	75 to 100% Coverage
Thickness	Z (Zero)	No color detected
	L (Light)	Pink to light red
	M (Medium)	Red
	D (Dark)	Intense velvet red

Thickness scores were converted to a numerical value (Z=0, L=1, M=2, and D=3) for calculation of whole mouth mean plaque score.

Table 7 Individual Animal Calculus Scores

Pristima Generated Report Title	Number of Pages
Dental Scoring (Calculus) Report with Individual Values	216

Modified Warrick-Gorrel Method		
Category	Score	Description
Thickness	Z	Zero
	L	Greater than zero but less than ½ mm thickness
	M	Between ½ to 1 mm thickness
	D	Greater than 1 mm thickness
Coverage	0	No detectable Calculus
	1	Scattered calculus covering less than 24% of the buccal tooth surface
	2	Calculus covering between 25 and 49% of the buccal tooth surface
	3	Calculus covering between 50 and 74% of the buccal tooth surface
	4	Calculus covering more than 75% of the buccal tooth surface

Thickness scores were converted to a numerical value (Z=0, L=1, M=2, and D=3) for calculation of whole mouth mean calculus score.

Statement of Compliance and Quality Control

The statistical analysis was conducted in compliance with the approved study protocol and with current BioSTAT Standard Operating Procedures.

Based on these documented activities, it is concluded that the statistical results incorporated in this report accurately reflect the statistical analysis of data received by BioSTAT.

1 Statistical Methodology

The following methods were used to analyze plaque, gingival index and calculus for both the whole tooth and the gingival half. Analyses were conducted separately for each dosing phase (Days 29, 57 and 85).

A preliminary evaluation of normality was conducted. For endpoints that resulted in a significant normality test, the analysis was conducted using the rank-transformed values.

Following the preliminary evaluation of the data, an ANOVA model with a fixed effect term for treatment group was used for analysis. The outcome of the treatment group effect served as a comparison to the treated group with the control.

All statistical tests were two-sided at the 5% significance level.

All statistical analyses were conducted using SAS[®] software version 9.4.

Records generated from this statistical analysis will be archived at BioSTAT Consultants, Inc., with the exception of the final report which will be transferred to the Testing Facility.

2 Results

Statistically significant treatment findings are summarized in [Table 2.1](#). Results of statistical analyses are summarized in [Section 3](#). Individual animal data are shown in [Section 4](#).

Table 2.1: Summary of Statistically Significant Treatment Level Findings

Variable	Day of Scores	Test Article	% Reduction
Gingivitis – Whole Mouth Mean	29	-	-1.64
	57	-	-1.90
	85	-	5.31
Plaque – Whole Mouth Mean Gingival + Occlusal	29	-	1.76
	57	-	-2.02
	85	-	1.85
Plaque – Whole Mouth Mean Gingival Only	29	-	0.77
	57	-	-3.17
	85	-	2.73
Calculus – Whole Mouth Mean Gingival + Occlusal	29	-	16.59
	57	-	18.80
	85	↓	26.66
Calculus – Whole Mouth Mean Gingival Only	29	-	8.02
	57	-	14.29
	85	↓	21.15

- Comparison with negative control not significant

↓ Statistically significant decrease compared with negative control

Tables Legend**Table Key**

Mean = arithmetic mean

% Reduction = percent reduction from negative control

SD = standard deviation

SE = standard error of mean

N = number of animals

Shapiro-Wilk (Normality) = test for normality of model residuals

F-Test = Overall model p-value for comparison of treatments

F-Test (Rank) = Overall model p-value for comparison of treatments conducted on rank transformation
